

HAKKIMIZDA

Firmamız filtre sektöründe "MOTOEC" markasıyla ürünlerini kullanıcılarına sunan, Türkiye'nin önde gelen ithalatçısı konumunda olup, "Motoec Otomotiv Gıda İnşaat Sanayi ve Ticaret A.Ş." olarak hizmet vermektedir.

Firmamız kaliteli ve uygun fiyatlı geniş ürün yelpazesiyle tüm otomobil ve hafif ticari araçların filtre ihtiyaçlarına cevap vermektedir. Ayrıca bayilerimiz ve teknik ekibimiz müşterilerimize destek vermektedir. **Ürünlerimiz, üreticilerle yapılan anlaşmalar (garantiert an EC) neticesinde üretici garantisinde olup, aynı zamanda "Sompo Japan Sigorta" bünyesinde "Ürün Sorumluluk Sigortası" ile de güvence altına alınmıştır.**

Ülke genelinde yerli üretici pozisyonunda olan firmaların kalite ve yüksek fiyat sorunu "MOTOEC" önderliğindeki ithalatçı firmaların sektöre girişleri sayesinde son kullanıcıya olumlu olarak yansımıştır. Ayrıca yerli üreticiye katkısı ve ülke insanına kaliteli ürün ve uygun fiyat olarak yansımaları açısından ithalat rejiminin faydaları da zaman içerisinde ortaya çıkmıştır.

ABOUT OUR COMPANY

Offering its products to its user with the brand "MOTOEC" in the filter sector and being the leading importer position in Turkey, our company is serving as "Motoec Otomotiv Gıda İnşaat Sanayi ve Ticaret A.Ş."

Our company meets the filter requirements of all automobiles and light commercial vehicles with a wide range of products with its quality reasonable pricing. Furthermore, our distributor and technical team provide support for our customers. **Our products are under the producers' guarantee in consequence of the agreements (garantiert an EC) made with the producers and also insured by "Product Liability Insurance" within the scope of "Sompo Japan Insurance".**

The quality and high price problem of the domestic producers in the country as a whole has positively reflected to the end user thanks to the sector entries of the importer companies led by "MOTOEC". In addition, the benefits of the import regime have emerged over time as a contribution to the domestic producers and in terms of a reflection to the people of the country as the quality products and reasonable pricing.

MİSYON

Filtre sektöründeki talebi ve ihtiyaçları yakından takip ederek, bu ihtiyaçlara gelişen teknoloji çerçevesinde cevap veren, çevreye duyarlı, kaliteli ürün ve hizmet garantisi sunan, satış sonrasında da müşterileri ile diyalog içinde kalarak gelişimine bu kanalda da devam eden kurumsal bir firma olarak; müşteri memnuniyetini her şeyin önünde tutmaktır.

MISSION

To value the customer satisfaction above anything as a corporate firm that follows the demands and requirements of the filter sector closely and responds to these needs under the frame of developing technology, offers environmentally sense, quality products and service guarantees and continues to develop in this channel by keeping in touch with its customers after sales.

Sürekli gelişen teknolojiyi yakından takip ederek, kaliteli ürünü, kaliteli hizmetle buluşturup kullanıcılarımıza ulaştırarak, sektöründe lider bir marka olmaktır.

VİZYON

To be a leading brand in its sector by following the constantly developing technology, bringing the quality products together with quality services and delivering to our users.

VISION

MOTOEC

filter

YAĞ FİLTRELERİ / OIL FILTERS

İçten yanmalı motorların yağlama sistemi, yağın motorun çalışan parçalarını yağladığı ve soğuttuğu kapalı bir sistemdir. Ayrıca, motorun çalışan parçalarının aşınmaları sonucunda oluşan ve yanma odasından gelen kirli maddelerin aktarılmasını ve temizlenmesini sağlar. Bütün içten yanmalı motorlarda, yukarıda bahsedilen kirletici maddeleri tutan filtreler yağlama sisteminin önemli bir unsurudur. Bununla birlikte, bu filtrelerin, geri dönüşü olmayan bir kimyasal proses olan yağ bozulmasını önleyemeyeceğinin bilincinde olmalı ve bu nedenle, otomobildeki filtrenin türüne bakılmaksızın, filtrelerle birlikte yağın da otomobil üreticisinin uyarılarına göre değiştirilmesine dikkat edilmelidir. Yağ filtreleri farklı şekillere sahiptir ve motor türüne bağlı olarak yapı ve çalışma prensibi açısından önemli farklılık gösterebilir.

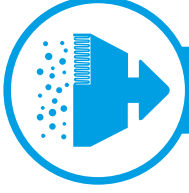

The lubrication system of I.C. engines are closed systems, where the oil is the substance, which lubricates and cools the working parts. It also rinses out and transports all kinds of contaminants in the form of suspended solids coming out from the combustion chamber, formed during the abrasive wear of the working parts of the engine. Such contaminants are effectively trapped in filters, which are an important element of the lubricating system in any I.C. engine. However it should be noted that these filters cannot stop the oil degradation which is an irreversible chemical process and that is why, regardless of the kind of filter installed in ones car, the oil should be changed in accordance with the car manufacturer indications (including filters). The oil filters have different shapes and depending on the engine type may differ significantly regarding construction and principle of operation.

YAKIT FİLTRELERİ / FUEL FILTERS

Yakıt filtreleri, benzin, mazot ve hatta LPG tesisatlarında bulunan yabancı maddeleri tutar ve içten yanmalı motorların hassas parçalarını hızlı aşınmalardan korur. Bütün yakıtlar üretim süreci ve dağıtımından kaynaklanan yabancı maddeler içerir. Tank yüzeylerinden gelen toz, is, su ve mikroorganizmalar modern motorlarda enjektörlerin, pompaların veya basınç ayar valflerinin hızla aşınmasına neden olabilir. Bu nedenle her yakıt sistemi, motor gereksinimlerine, yakıt kalitesine ve olası uygunsuz bekleme koşullarına göre en uygun şekilde seçilen filtrelere sahiptir. Filtreler için beklentiler çok yüksektir. Modern motorlarda, 3 ila 5 µm boyutlarındaki yabancı maddelerin % 90'ının durdurulması gerekir. Çoğu durumda daha iyi performans için araç yakıt sistemine birden fazla filtre takılır. Bununla birlikte, yağ filtrelemesine kıyasla, yakıt filtrasyonunda, filtreler tıkanıldığında yakıt akışını düzenleyen hiçbir by-pass valfi yoktur. Bunun nedeni, yanma odasına sadece temiz yakıtın girmesi gerektiğine dair bir kuralın olmasıdır. Bu nedenle, motorun filtrelenmemiş yakıtla çalışmasındansa, kirli filtre nedeniyle yakıtsız kalarak çalışmaması daha iyidir.

Fuel filters trap contaminants present in fuel, diesel oil and even in LPG installations, protecting precise elements of I. C. engines fuel systems from rapid wear. These fuels contain contaminants from the production process and distribution. Dust, soot from outer tank surfaces, water and micorganisms may cause the rapid wear of injectors, pumps or pressure-regulating valves in modern engines. Therefore each fuel system has filters which are optimally selected according to engine requirements, fuel quality and expected exploitation conditions. Requirements for filters are very high. In modern engines it is required that contaminants the size of 3 ÷ 5 µm are stopped with the effectiveness of more than 90%. In many cases more than one filter is installed in the car fuel system for better performance. However, in comparison with oil filtration, there are no by-pass valves in fuel filtration which clear the fuel flow when the filters are clogged. That's because there is a rule that only clean fuel goes into the combustion chamber. Therefore it is better that the engine stops due to lack of fuel (dirty filters) than if it had to work using non filtered fuel.

HAVA FİLTRELERİ / AIR FILTER

Hava filtreleri, motor tarafından emilen havada bulunan madeni toz, kurum ve organik parçalar gibi katı partikülleri tutar. Filtre üretimi ve üretimde modern hammaddelerin kullanımının ilerlemesi sayesinde katı partiküllerin filtrelenebilme seviyesi, bu partiküller birkaç mikrometre çapında bile olsa % 99,9 seviyesine ulaşmıştır. İçten yanmalı motorlar, yanma işlemi sırasında çok miktarda hava kullanırken (1 litre yakıt başına ortalama 10 m³ hava), yüksek filtreleme verimliliğine sahip filtrelerin de düşük akış direncine ve yüksek kirlenici emilimine sahip olması gerekir. Bu özelliklerden dolayı, filtre değiştirmeleri arasındaki sürenin uzatılması mümkündür. Otomotiv endüstrisinde kullanılan modern hava filtreleri, çok farklı şekil ve ebatlarda tasarlanarak, farklı ama en iyi hammaddeler kullanılarak yapılmaktadır. Filtreleme sistemi değiştirilemez filtre yuvası ve değiştirilebilir kartuşlardan oluşmaktadır.

Air filters trap solid particles such as mineral dust, soot and organic pieces floating in the air, which is sucked in by the engine. The progress in filter constructing and application of modern filtration materials brings the level of contaminants filtration to the level of 99,9% for particles of even few micrometers size. Whereas the I.C engines use a great amount of air during combustion process (average amount of 10m³ of air per 1 litre of fuel), filters with high filtering efficiency must also have low flow resistance and high contaminants absorptivity. Due to such properties, it is possible to extend the period between filter replacements. Modern air filters used in the automotive industry are designed and constructed in versatile shapes and sizes and made of different, optimally selected materials. All filters consist of undismountable casings and replaceable cartridge.

KABİN FİLTRELERİ / CABIN AIR FILTERS

Kabin filtreleri olarak da adlandırılan polen filtreleri, doğrudan yoldan emilen, havalandırma veya klima sistemi yoluyla araç içine giren havayı filtrelemek için kullanılır. Üretilen modern arabaların çoğunda bu filtreler bulunur; çünkü artık bu bir lüks değil, güvenlik ihtiyacıdır. Yorgunluk, saman nezlesi, göz sulanması veya solunum bozukluğu kesinlikle sürücünün reflekslerini olumsuz yönde etkilemekte ve yol güvenliği için tehlikeli oluşturabilmektedir. Bu semptomlar çoğunlukla emilen hava ile yabancı maddelerin araç içerisine girmesinden kaynaklanır. Yabancı maddelerin yoğunluğu mevsim, hava koşulları, yerel endüstrinin yoğunluğu ve yol trafiği gibi bir dizi faktörün sonucuna bağlıdır. Polen filtresi olmayan araçlarda hava kirliliği dışarıdan altı kat daha yüksek bir seviyeye ulaşabilir.

Kirlenen havayı solumak, insan sağlığı üzerinde olumsuz ve genellikle geri döndürülemez bir etki yaratmaktadır. İnsan solunum sisteminde kendiliğinden temizlenebilmesi anlamına gelen doğal bariyerler ve savunma mekanizmaları olmasına rağmen, yabancı maddelerin büyük yoğunluğu bronş borularına hatta akciğer alveollerine girer ve çoğu zaman enfeksiyon kaynağı haline gelir. Polen filtresinin verimliliği, filtre değişimi sırasında kolayca fark edilebilir. Tek yapılması gereken, kullanılmış bir filtrenin yüzeyine bakmaktır. Filtre üzerinde toplanan bu yabancı maddelerin hepsinin akciğerlerimize girebileceğinin farkında olmak, muhtemelen aracımızda polen filtresi kullanmak için iyi bir gerekçe olacaktır.

Dust filters, also called cabin filters, are used for filtering air which is sucked in directly from the road, forced in through ventilation or air conditioning system into the driver's cabin. Most of the manufactured modern cars are equipped with these filters, as it is no more a symbol of luxury but a safety requirement. Tiredness, hay fever, eye watering or breathing disorder definitely have a negative impact on the driver's reflexes and they might be really dangerous for road safety. These symptoms are often caused by contaminants coming into the driver's cabin with the sucked air. The concentration of certain types of contaminants results from a number of factors such as season, weather conditions, intensity of local industry and road traffic. Air dustiness in cars with no cabin filters may reach a level six times higher than outside, as the working ventilator makes the cabin act as a decanter.

Breathing contaminated air causes negative, often an irreversible impact on the human health. Despite natural barriers and defence mechanisms, which mean the ability of self-cleaning of the human respiratory system, the vast majority of pollutants get into the bronchial tubes or even into the pulmonary alveoluses, often becoming the source of infections. Cabin filter efficiency can be easily noticed during the replacement. All one has to do is just have a look at the surface of an used filter. Being aware that all of these contaminants, gathered on the filter medium, might have been inhaled into our lungs is probably the best argument for using cabin filters in your car.
